

Product datasheet

ac.PIM

ac.PIM

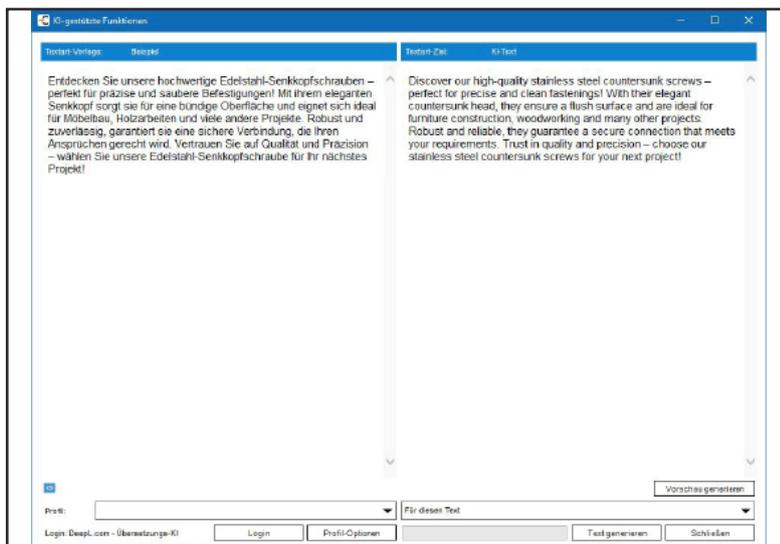

The module for central maintenance, management and media-neutral provision of product data

Your product advantages

- ac.PIMk-tool integrated
- Configurable standard interface for data import based on CSV files, XML files or ODBC connection
- Configurable standard interface for data export based on CSV files or XML files
- User rights management
- User interface configurable and multilingual
- Surface themes are selectable
- Image pool and text pool integrated
- Inheritance function and mass maintenance
- Print production with ac.KATbridge
- Colored display of export-relevant fields mapped in an export profile
- Check overview of the status of the article maintenance
- Workflow control, status-based and user-group dependent

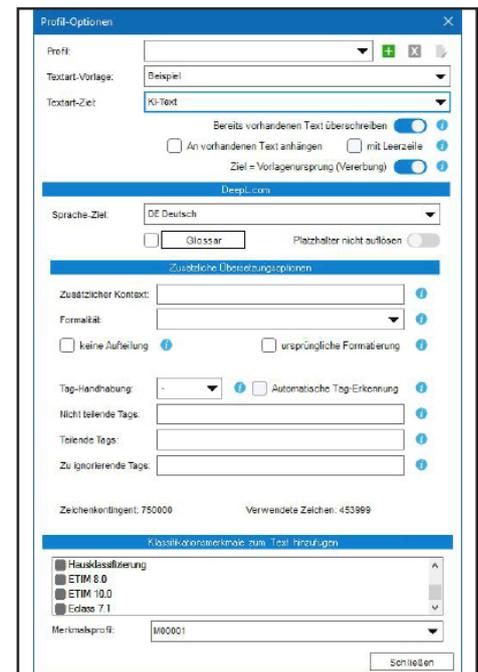

Optional extensions of ac.PIM:

- AI-supported translation of features
- AI-supported translation of texts
- AI-supported translation of documents
- AI-supported text generation

Your benefit

- Central, uniform, multilingual product data maintenance
- Media-neutral data management for different output channels
- Cross-departmental process optimization
- High cost and time savings
- Higher quality of your product communication
- Significantly higher data quality
- Convenient and up-to-date product communication

With the ac.PIM you get a user-friendly and intuitive module for the preparation and maintenance of your data.

ac.PIM

Function overview ac.PIM

Functions included in the standard

The care module

With ac.PIM you get a user-friendly and intuitive module for the preparation and maintenance of your data.

- Basic master data, texts and assignment of images, pictograms and documents
- Classifications (house classification, ETIM, eCl@ss or proficl@ss / according to the class provider)
- Class characteristics (according to the class provider, eCl@ss as of version 5.1.4)
- Additional characteristics for the class (ETIM, proficl@ss, eCl@ss) maintainable
- User rights management via groups and group rights. n" groups can be assigned to a user. 1 to n" users can be assigned to a group. The rights are assigned to the groups
- Mass maintenance for master data maintenance, classifications, class characteristics and assortments
- Inheritance within the article master tree, the article characteristics and the assortments
- Versioning of articles (one versioned state and one state for editing)
- Colored display of export relevant fields
This function allows you to display in color fields in the ac.PIM application that are mapped in an export profile.
One of all available export profiles can be selected for display.
- Display examination overview
This function allows you to view check results of checks for one or more items in a separate window.
The exam results can be exported directly from the application as a CSV file and edited in the main window.
- Status based workflow control:
 - User group-dependent assignment of checks to the various statuses
 - Maintainable master data status
 - Status group assignment and status sequence

Import interface

Any number of profiles can be created for the imports. Within the profiles, the user can make configurations and mappings independently.

Data sources supported in the standard:

- Imports based on CSV files, XML files and ODBC sources
- Further connections e.g. web services on request

Export interface

Any number of profiles can be created for the exports. Within the profiles, the user can make configurations and mappings independently.

- Exports based on CSV files and XML files
- Further connections e.g. web services on request
- Exports based on a standard interface (BMECat 1.2 or 2005) and a classification (ETIM, eCl@ss or proficl@ss) (see below)
